

```
Gcc -o main main.c  
./main [int1]  
Input [int2] // doing this after int1 times, we will run out of space
```

Cat accesses.txt | ./main [int] // gives us many page fault, testing “against” accesses

3 different files, and a header file

Or

Have them all in one file and a switch

Fifo - linked list

Graph the data (instead of table)

IsInMemory: check if pageRequest is in pageTable
